The picture below is the physical Arduino setup that was used.

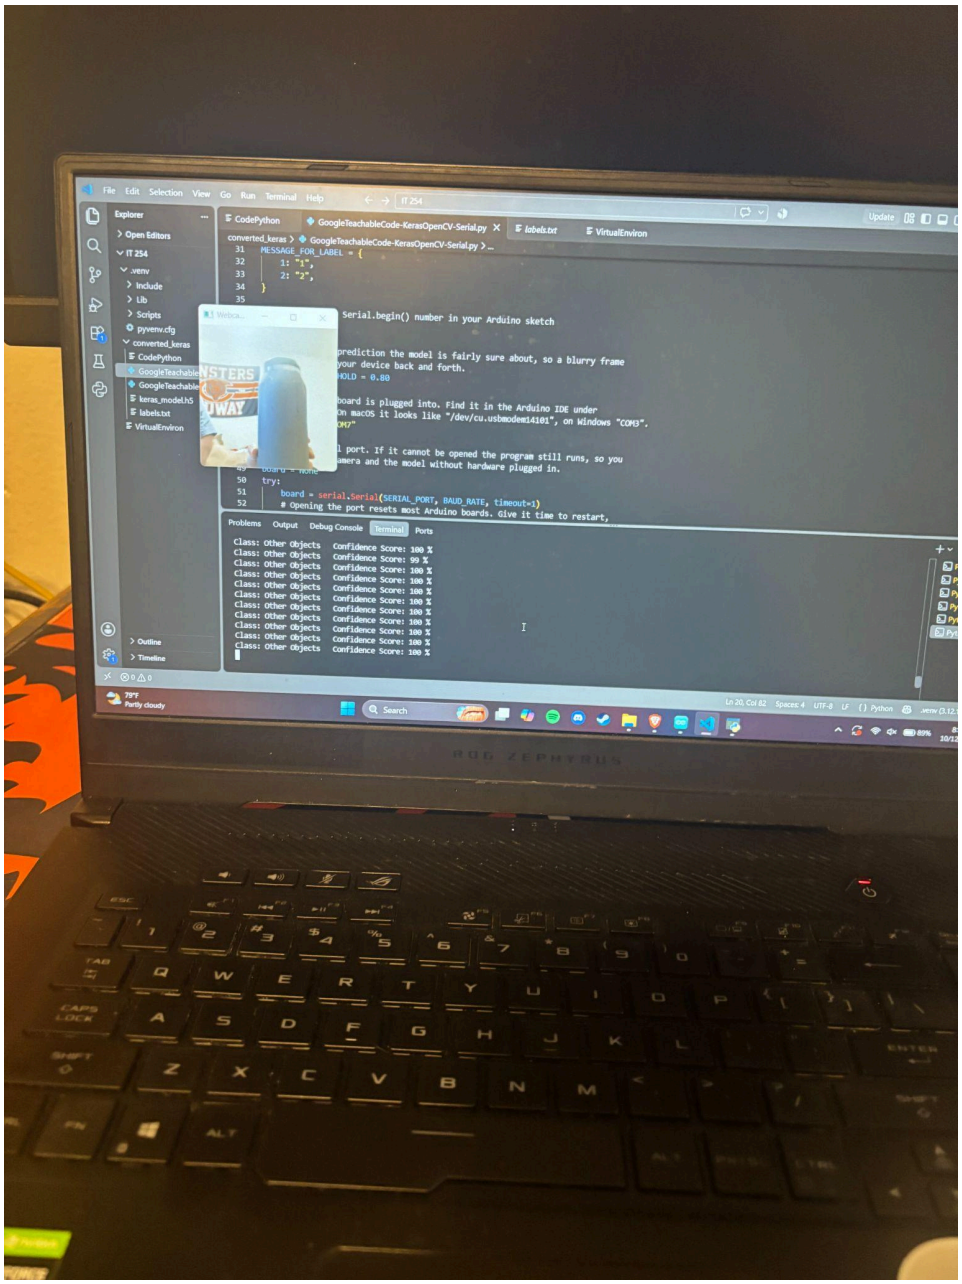

The above Arduino set up was based off the below image acquired from the following URL: https://projecthub.arduino.cc/stannano/one-digit-7-segment-led-display-819bc

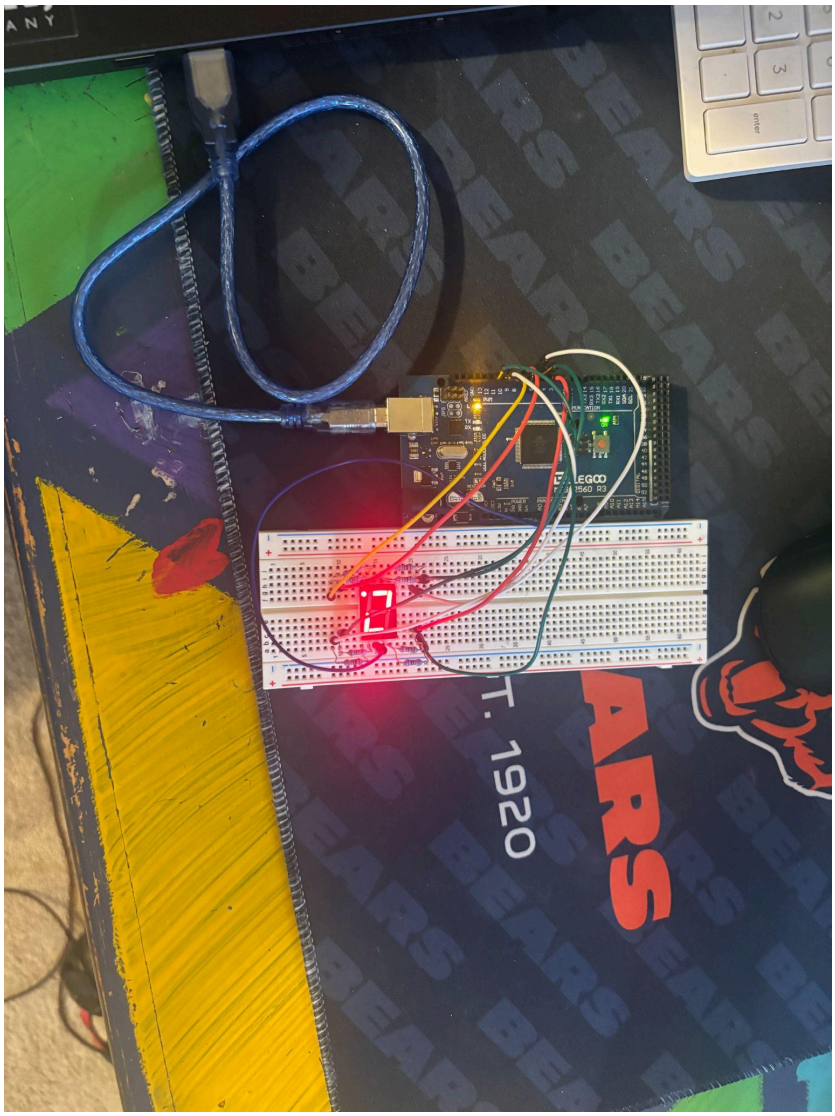

The following image is what the program looks like when running while taking camera input but with the camera blocked.

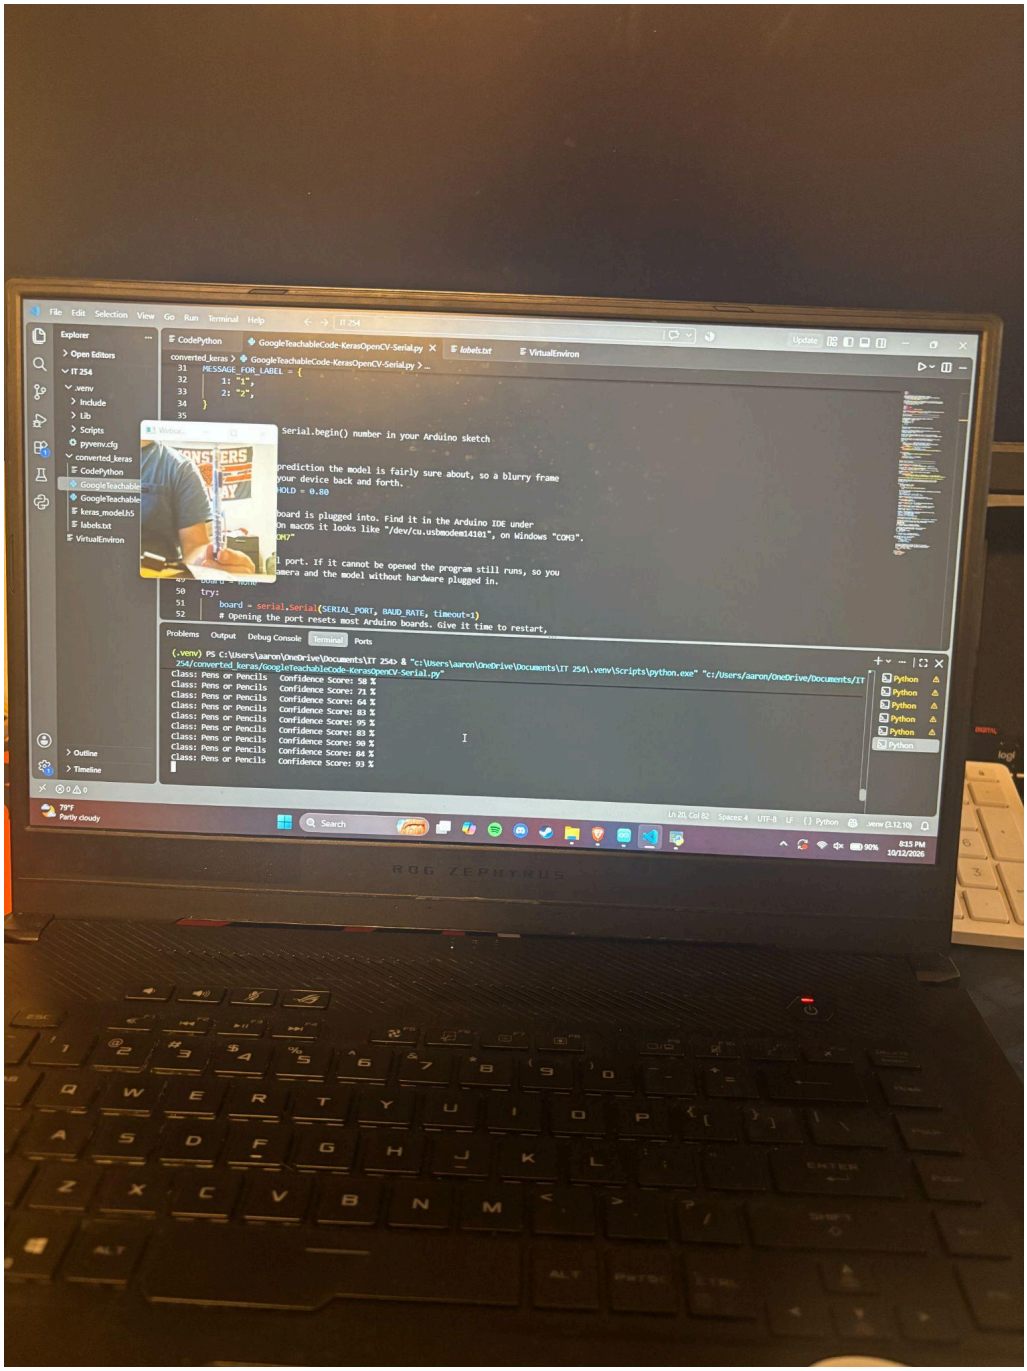

The following image is what is displayed on Visual Studio when the program identifies an “Other Object” successfully.

The following image is what is displayed on the Arduino when the model detects an “Other Object”

The following image is what displays on Visual Studio when the model detects a Pen or Pencil.

The following is what is displayed on the Arduino when the program identifies a “Pen or Pencil”
